

Behavioral Activation Activity Schedule

Cognitive Behavioral Therapy for Depression · Weekly Tracking Worksheet

Why This Works

Research shows that depression causes withdrawal from rewarding activities, which deepens depression. This schedule helps break that cycle by planning meaningful activities and tracking how they affect your mood. Rate each completed activity for MASTERY (sense of accomplishment) and PLEASURE (enjoyment), even small amounts count.

Name: _____ Week of: _____ Therapist: _____

Time	Monday	Tuesday	Wednesday	Thursday	Friday	Saturday	Sunday
Morning (6am–12pm)	Activity: M: __ P: __ —	Activity: M: __ P: __ —	Activity: M: __ P: __ —	Activity: M: __ P: __ —	Activity: M: __ P: __ —	Activity: M: __ P: __ —	Activity: M: __ P: __ —
Afternoon (12pm–6pm)	Activity: M: __ P: __ —	Activity: M: __ P: __ —	Activity: M: __ P: __ —	Activity: M: __ P: __ —	Activity: M: __ P: __ —	Activity: M: __ P: __ —	Activity: M: __ P: __ —
Evening (6pm–10pm)	Activity: M: __ P: __ —	Activity: M: __ P: __ —	Activity: M: __ P: __ —	Activity: M: __ P: __ —	Activity: M: __ P: __ —	Activity: M: __ P: __ —	Activity: M: __ P: __ —

Daily Mood Ratings

Rate your overall mood at the end of each day: 0 = worst possible, 10 = best possible

	Monday	Tuesday	Wednesday	Thursday	Friday	Saturday	Sunday
Mood (0-10)	_____	_____	_____	_____	_____	_____	_____

Weekly Reflection

Which activities gave you even a small sense of accomplishment or pleasure?

What patterns do you notice between activities and mood?

One activity to prioritize next week:

Clinician Note: Review the schedule collaboratively. Highlight any activity where M or P > 0. Use this as data to schedule more of what works. Target 1-2 activities per time slot initially. BA precedes thought monitoring in moderate-severe depression — action changes mood, then cognition.
